

Nordberg
C Series jaw crushers

The world's favourite jaw crusher

Metso's Mining and Construction is the world's leading rock and mineral processing group, has installed over 10 000 jaw crushers since the 1920s. Today the Nordberg C Series is indisputably the world's favourite jaw crusher. Where cost-efficiency is primary, re-use of hard, abrasive materials is concerned, C Series crushers represent the highest technical and manufacturing knowledge.

All C Series jaw crushers are based on a revolutionary modular, non-welded frame construction. This design offers owners the highest possible fatigue strength, excellent reliability and numerous mounting possibilities. This, combined with high-quality cast steel components and premium spherical roller bearings, means exceptionally high crusher availability, cost-efficient crushing and low cost per ton.

There are now two ranges of models in the C Series range. The first is the well-known traditional jaw crusher range that is designed for stationary as well as mobile applications (C80, C100, C3054, C120, C125, C140, C150, C160, C200). The second range is designed specifically to meet the needs of small to medium size mobile crushing (C96, C106, C116). All C Series crushers are designed to crush very hard rock.

Whatever your crushing needs – from

hard and abrasive rock to various recycling materials – you'll find the optimum solution with the Nordberg C Series jaw crushers.

Take a closer look at the world's favourite jaw crusher!

Nor all jaw crushers are the same.....	22

The modular, non-welded frame construction ensures excellent durability.

The robust pitman assembly ensures the greatest reliability even under the most severe crushing conditions.

The modular, non-welded frame construction ensures excellent durability.

World-class craftsmanship and materials

Modular, non-welded construction

C Series crushers are premium class crushers due to their design as well as to the materials that are used to produce them. Attention has been paid to even the smallest details, so as to ensure the highest possible functionality and reliability, without any compromises. Those who have owned and operated C Series jaw crushers know that not all jaw crushers are the same!

Durable pitman assembly

The pitman is made of high-quality cast steel and is propelled by two massive cast steel or iron flywheels. A very large eccentric shaft forging and four large spherical roller bearings that are all of the same size ensure the greatest reliability even under the most severe crushing conditions. The grease-lubricated bearings are kept free from contamination by means of well-proven labyrinth seals.

Single piece cast steel frame bearing housings

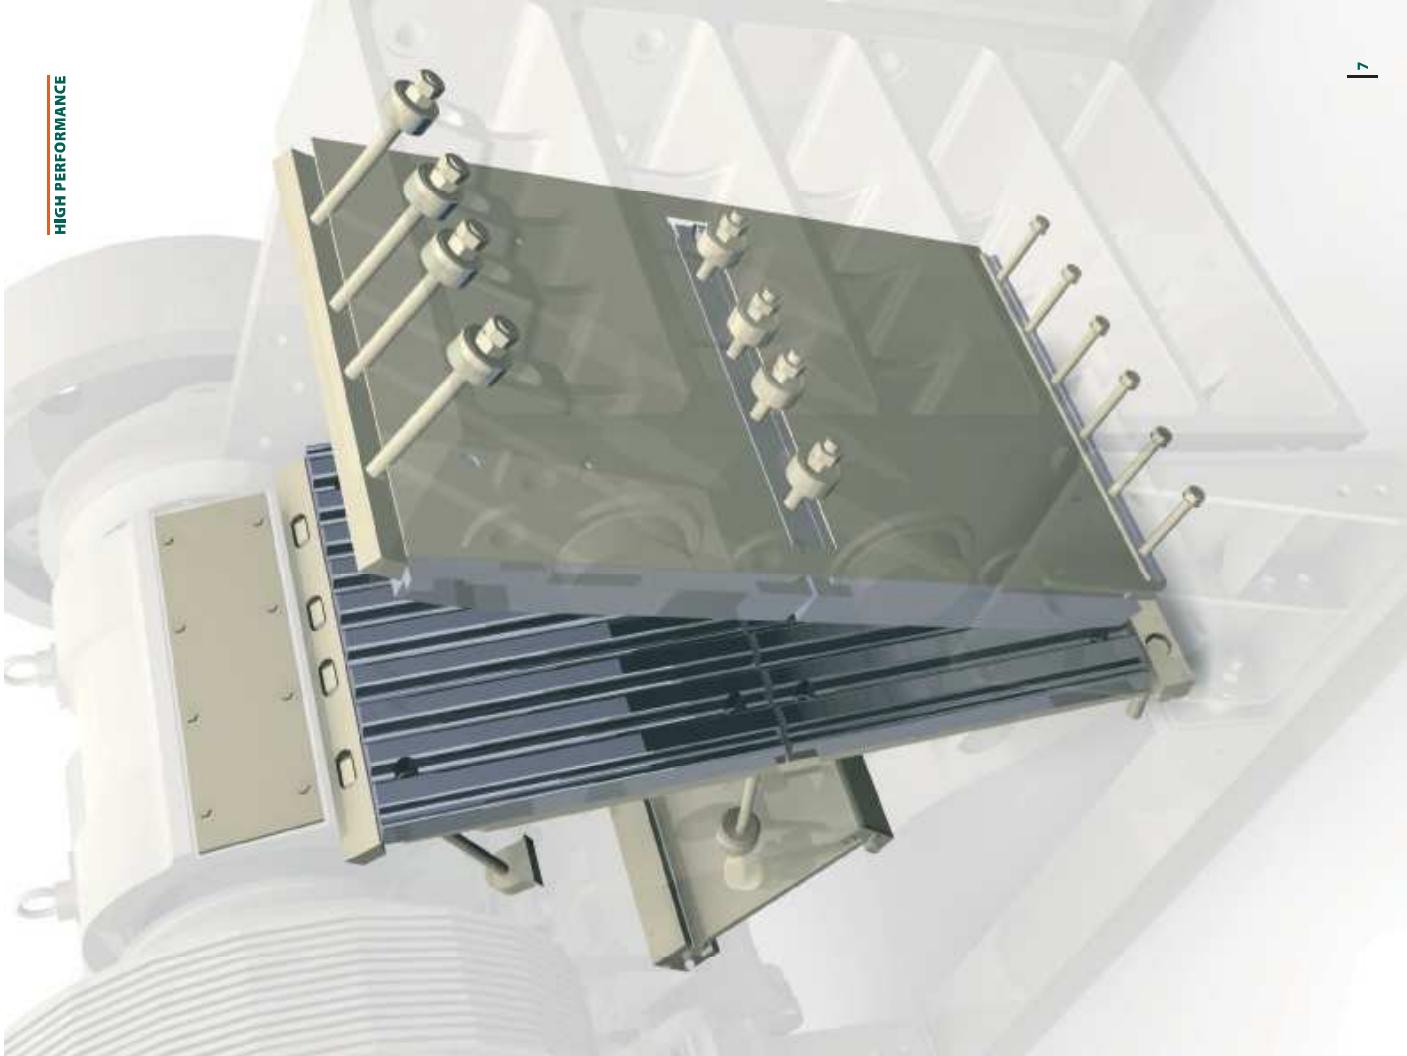

The single piece cast steel frame bearing housings ensure a perfect fit to the crusher frame. They also prevent unnecessary loads to the frame bearings that are common with 2-piece frame bearing housings.

Repairable crusher construction

C Series crushers constantly fulfill the durability expectations of their owners around the clock, but they will eventually need some care. Due to the use of cast steel components, the crusher can be economically reconditioned or rebuilt after many years of operation. Such repairs are uneconomical or impossible to carry out with crushers of alternative designs.

All C Series jaw crushers incorporate larger and sturdier eccentric shaft bearings than other crushers of comparable size.

Initially developed for tough Scandinavian hard rock conditions, C Series jaw crushers crush even the hardest feed materials efficiently.

The right cavity design

C Series jaw crushers are literally designed "from the inside out" because the cavity is the heart and only purpose of the jaw crusher. That is why over the years great attention has been paid to the feed opening dimensions, as well as to the cavity height. The right feed opening width to depth ratio ensures minimum blockage and eliminates unnecessary height from the crusher.

Aggressive kinematics and high power

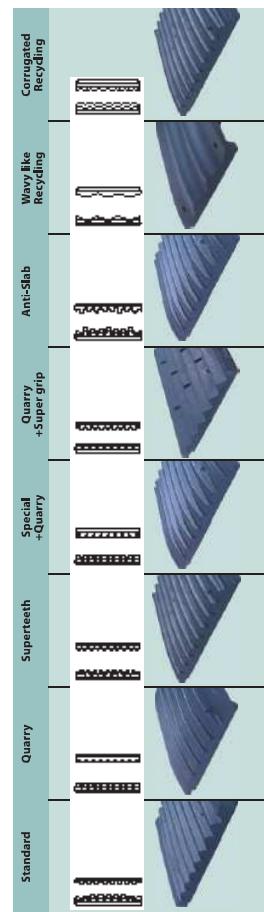

In addition to the right cavity dimensions, the right kinematics must be applied. That is why C Series jaw crushers have a large eccentric throw coupled with a steep toggle plate angle that magnifies the effective stroke at the crusher discharge. The large stroke, combined with the right speed, fly-wheel inertia and high available crusher power result in truly high crusher performance. Operation at small settings as well as the method of setting measurement results in finer products in comparison to other crushers.

The right jaws for a given application

Many types of jaws have been developed over the years in order to optimize the performance of Nordberg C Series crushers in a very wide range of applications, including conventional quarries, mines, gravel pits, and recycling of demolition material and asphalt. The tooth profiles as well as the thickness of the jaws are optimized and combined with the right manganese steel alloys to maximize throughput and minimize operating costs. Metso also actively develops custom jaws for special applications. Special cheek plates are also available.

The right cavity design and kinematics are why C Series deliver high performance, time after time.

Many types of jaws are available for different applications. For recommendations concerning your specific application please contact Metso.
C Series crushers are designed from the "inside out".

* Smaller closed side settings can be often used depending on application and production requirements. For a performance estimation for your specific application, please contact us.

The above figures represent through the crusher capacities, which are based on a feed material with an average specific gravity of 2.7 t/m³ and a maximum feed size that will enter the crusher without bridging and material finer than the crusher's close side setting removed. The capacities may vary depending on the feeding method and on feed characteristics such as gradation, bulk density, moisture, clay content and crushability.

Measurement of the crusher's closed side setting varies depending on the jaw profile that is being used and has an impact on the crusher's capacity and product gradation. The following factors will enhance crusher capacity and performance:

1. Proper selection of the jaws.
2. Proper feed prediction.
3. Controlled feed rate.
4. Sufficient feeder capacity and width.
5. Adequate crusher discharge area.
6. Discharge conveyor sized to convey maximum crusher capacity.

Indicative product gradation

Nordberg C Series jaw crushers fits perfectly for primary crushing stations.

The manual wedge setting adjustment is faster and safer than outdated shim setting adjustment systems.

The hydraulic wedge setting adjustment allows you to change the setting in seconds even while the crusher is idling.

Designed to bring your crushing costs down

In addition to bringing you high performance, C Series crushers are also designed to bring your total crushing costs down. Each unique feature of the C Series brings specific benefits that have a direct impact on the bottom line – which means that you will be more profitable. Those who have owned and operated C Series jaw crushers know that not all jaw crushers are the same!

Tired of repairing your jaw crusher's foundation?

Rubber dampers and stoppers effectively decrease crushing loads to the foundation by absorbing peak shock loads and allowing the crusher to move vertically and longitudinally. This unique and innovative system eliminates the need for anchor bolts, and is a much more desirable solution as all anchor bolts eventually damage jaw crusher foundations.

Fast and safe setting adjustment systems

All C Series crushers are equipped with a proven, rugged and fast wedge setting adjustment system. The wedge setting adjustment is simpler, much safer and faster than outdated shim adjustment systems. The crusher's setting can be manually adjusted with rods that are supplied with the crusher in a matter of minutes, without having to handle dirty and bulky shims.

Alternatively, the crusher's setting can be changed in seconds, from remote location, even while the crusher is idling! The system is also especially effective at cleaning the crusher's cavity should it stall under load due to interruptions in the supply of electric power.

Special rubber dampers and stoppers allow the crusher to move vertically and longitudinally while preventing wear and subsequent damage to the crusher's foundation.

A Nordberg C14 jaw crusher in a stationary installation.

The integral motor base reduces space requirements and maintenance costs.

Versatile integral motor base

The flywheel guards reduce space requirements around the crusher.

Compact and service friendly flywheel guards

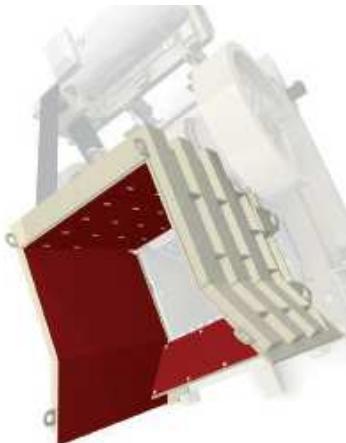

Jaw crushers are bolted onto the crusher's side plates, and effectively protect operators from the potentially dangerous moving parts. Viewing windows and access doors allow service crews to inspect and service the crusher. Their use also gives greater access to the crusher as the guards are not laying on the service platform.

Custom feed chute

The feed chute is designed to effectively guide the feed into the crusher's cavity. Jaw and cheek plate removal and installation are carried out without having to move or remove the feed chute. The feed chute is bolted to the crusher and can be removed for other maintenance purposes.

Other excellent cost saving features

There are several additional features that will assist you in reaching lower operating and installation costs. Amongst these features are an automatic grease lubrication system, different mounting brackets to accommodate different feeding heights, temperature and speed sensors, protection plates, and intermediate plates in order to maximize the utilization of the manganese jaws. There are even special deflection plates available in order to protect the crusher discharge conveyor belt from sharp steel bars that are often present in recycling applications.

The feed chute effectively protects the crusher and can be removed from the crusher for maintenance purposes.

A C125 during the installation phase at a new primary crushing plant.

A C125 during the installation phase at a new primary crushing plant.

The right choice for surface installations

The excellent replacement for your existing crusher

Due to their overall space requirements, C Series crushers are an ideal choice for the replacement of existing double and single toggle jaw crushers. Foundation loads, when compared to those of older version crushers, are less and therefore modifications to the existing foundation are rarely required.

An increase in plant capacity, the ability to process a coarser feed and the ability to produce a finer product are common benefits when replacing double toggle as well as single toggle jaw crushers of comparable size.

Comprehensive expertise in complete plants

Metsä designs and supplies complete aggregate crushing and screening systems. We are globally local, and manage plant design, equipment selection, sourcing, manufacturing, installation, and commissioning.

New primary crushing plants are tailored to each customer's needs. Various types of feed arrangements, automation, serviceability, and overall cost effectiveness are trademarks of our success.

A C200 after replacement of a double toggle jaw crusher. Plant capacity was increased without having to modify the foundations.

A Nordberg C145 jaw crusher in a stationary installation.

C160 in an underground gold mine.

The right choice for underground installations

C Series jaw crushers, with their pinned and bolted design, are easy to transport and maneuver even in narrow underground mines.

C Series jaw crushers are indisputably the most popular crushers in underground mines and quarries all around the globe. Their productivity, reliability, ease of transport and possibility to automate make them an ideal choice for operations that run 24 hours a day.

Underground assembly

Transportation of C Series crushers to underground installations is greatly simplified as each major component can be handled individually, and final crusher assembly is done underground. This has a direct impact on mine planning that often results in considerable time and cost savings.

Final assembly underground requires typical lifting facilities and a surprisingly short amount of time.

Easy to automate
Due to their hydraulic setting adjustment, C Series jaw crushers can be fully integrated into plant automation systems. The setting of the crusher can be changed from an electrical cabinet next to the crusher, or from the operator's room, all at the touch of a button, and even while the crusher is idling. The lubrication of the crusher's bearings can also be automated. Bearing temperatures, crusher speed and cavity level can all be measured and fully integrated into plant automation systems.

A Nordberg C200 jaw crusher being assembled at an underground mine. The crusher was transported in pieces and assembled underground.

Mobile crushing with the NW125.

Three stage crushing and screening process with the Lokotrack LT10, LT300CP and LT300GPb.

The leader in primary jaw crusher mobile plants

Metso has pioneered the development of trade-mounted, fully mobile crushing plants, and has also supplied wheel-mounted and semi-mobile plants for many decades. The Lokotrack (LT) and Nordberg (NW) mobile jaw plants are used in aggregate production, mining, recycling, cement production and tunnel crushing.

At the heart of every jaw crusher mobile plant is a Nordberg C Series jaw crusher.

Full mobility with the Lokotrack range
The Lokotrack Series mobile crushing plant is based on the innovative idea of flexibility by moving the equipment to the rock face in order to eliminate the need for haulage trucks. Lokotracks can be moved within and between sites, which means lowered material transport costs. Transportability can further be improved with special options like the bogie and split version. Fully mobile crushing equipment offers considerable

There's a Nordberg mobile plant for every crushing process

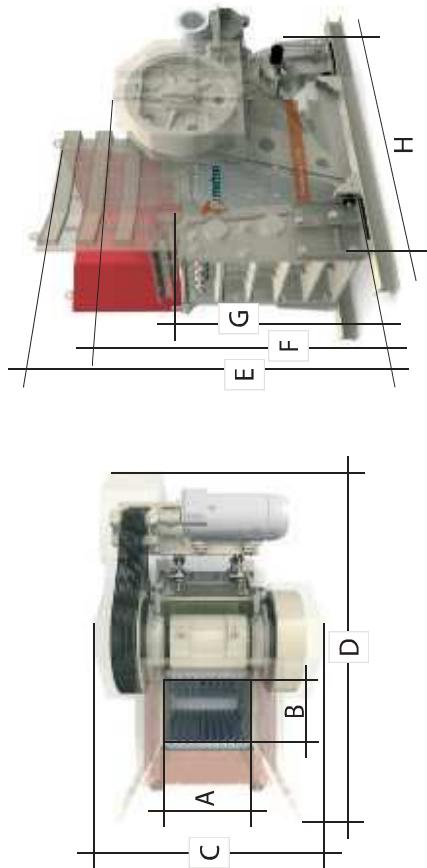

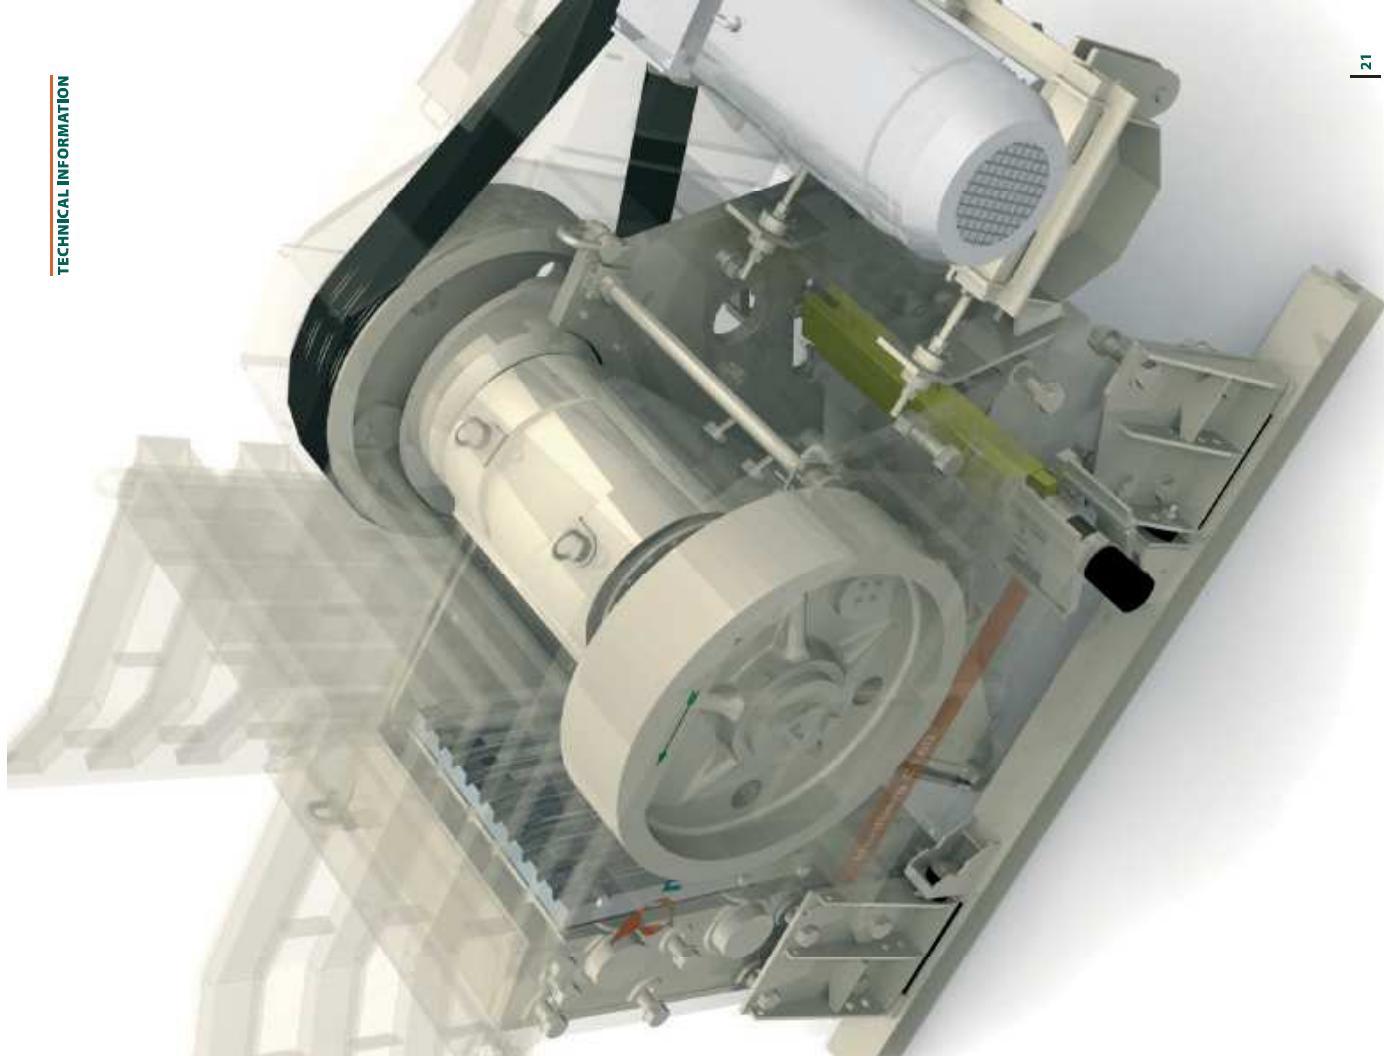

Whether the priority requirement is high production capacity, good process adaptability, excellent cubicity or efficient recycle crushing, the Metso mobile plant range can provide the right answer.

From contract crushing to demanding in-pit crushing applications, Metso has the right mobile plant specified for your capacity and end product needs.

Certified general arrangement, foundation and service space requirement drawings are available from Metso.

Not all jaw crushers are the same

Contrary to popular belief, not all jaw crushers are the same. This is certainly the case for Nordberg® C Series™ jaw crushers, and there is no secret to this success. Take a closer look at the world's favourite jaw crusher!

High quality and reliability

- World-class craftsmanship and materials
- Modular non-wedged construction
- Four equal size bearings that are larger than those of most crushers of comparable size
- Cast steel pitman and crusher frames
- Single-piece cast steel frame bearing housings
- Repairable crusher construction

Outstanding performance

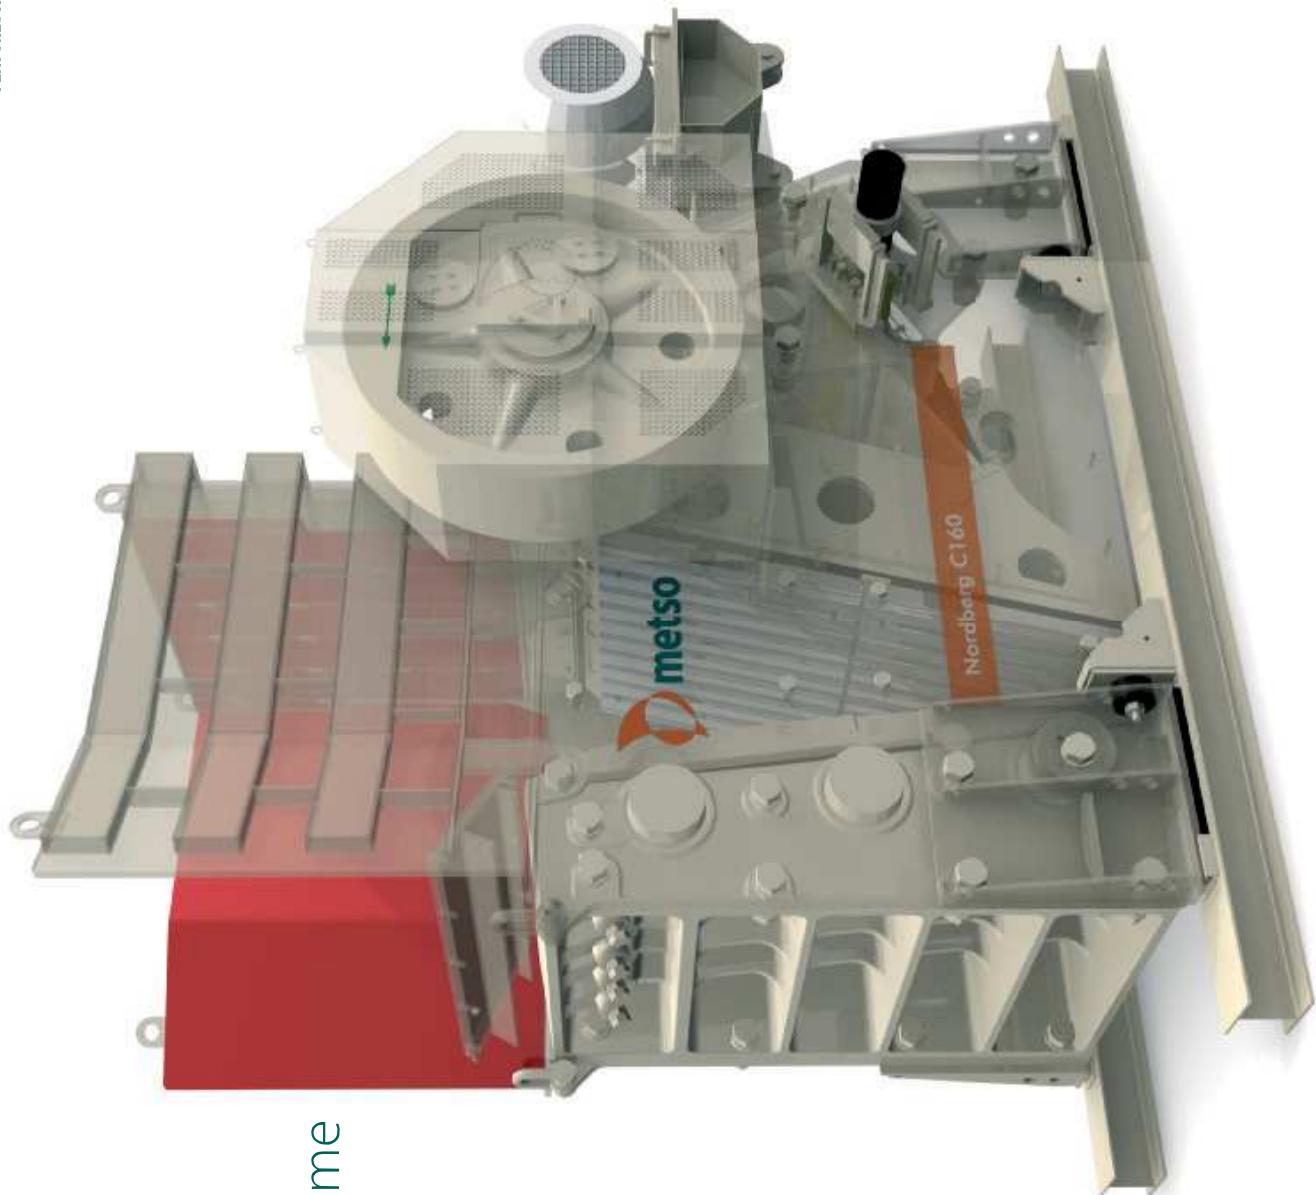

- Efficient cavity designs
- Aggressive kinematics
- Long stroke, optimum speed
- Small allowed crusher settings
- The right jaws and cheek plates for the widest range of applications

Low operating and installation costs

- Easy to automate
- Fast and safe wedge setting adjustment system
- Protection plates behind the jaw plates
- Rubber dampen crusher mounting
- Versatile integral motor base
- Compact and service friendly flywheel guards
- Custom feed chute
- Automatic grease lubrication system

Used in a wide range of applications, both stationary and mobile

- Aggregate
- Mining (surface and underground)
- Recycling (concrete, asphalt, etc.)
- Industrial (slag, anodes, etc.)

Metso's Mining and Construction crushing and screening equipment

Product families:

Crushers

- C series jaw crushers
- SUPERIOR® gyratory crushers
- GP series cone crushers
- HP series cone crushers
- MP series cone crushers
- NP series horizontal impact crushers
- Barmac series vertical impact crushers

Screens

- DF series screens
- CVB series screens
- FS series screens
- TS series screens
- MF series screens
- RF series screens

Feeders

- TK series feeders
- VF series feeders
- LH.G series feeders
- VG series feeders
- PF series feeders
- HRBM series feeders

Mobile crushing and screening plants

- Lokotrack LT series track-mounted crushing plants
- Lokotrack ST series track-mounted screening plants
- Lokotrack CT and CW series track- and wheel-mounted conveyors
- Nordberg NW series wheel-mounted crushing and screening plants

Stationary crushing plants

- Complete plants for aggregates production
- Complete plants for recycling applications

All Metso Minerals Oy Tampere Works equipment is produced in accordance with a quality assurance system that complies with the ISO 9001 standard, as certified by Lloyd's Register Quality Assurance Limited.
